37° flare adapters for
compression fittings

	Product Groups	Page
	Assembly instructions	7.02
	Component Parts	
	Nuts	7.03
	Flare sleeves	7.04
	37° flare adapters	7.05
	Complete sets	7.06

These adapters enable standard 24° ISO 8434-1 / DIN 2353 fittings to be used with tube which has been flared in accordance with the 37° JIC ISO 8434-2 / J514 standard.

Assembly instructions

BOOK INDEX

SECTION INDEX

1. Cut the tube square (do not use a pipe cutter).

2. Deburr the pipe inside and outside, do not chamfer. Clean the tube end, otherwise the sealing surface of the tube will be damaged when it is flared.

3. Slide the nut and the sleeve over the tube as shown in the illustration.

Tube O.D.	06	08	10	12	14	15	16	18
DB min.	9.1	11.3	13.1	15.3	18.6	19.1	20.6	23.2
DB max.	10.0	12.0	14.0	16.0	19.6	20.0	22.0	24.0
Tube O.D.	20	22	25	28	30	35	38	42
DB min.	25.6	26.5	31.1	32.7	37.0	41.8	46.0	48.8
DB max.	26.8	27.5	33.0	33.3	38.7	42.7	47.2	49.8

4. Flare the tube using flaring tools or a flaring machine. The flare outside diameter (DB) must not exceed the limits in the table. The flared cone must be concentric to the OD of the tube and the sleeve. The inside of the tube must be clean and free from striations.
5. To prevent cold welding / "galling", the threads must be lubricated - use Gleitmo 810 or High Tech Paste ASW 040P - see section 12. These are special lubricants for stainless steel fittings.
6. / 7. Press the flare adapter into the fitting body, then press the flared tube onto the face of the adapter. The sleeve and nut should already be on the tube - screw nut onto fitting body by hand. Using a spanner, tighten the nut until a noticeable increase in torque occurs, then proceed to tighten another 1/4 turn.

For every time the connection is undone, re-tightening must be done without overtightening.
